

## Filter Fabric

### DESCRIPTION:

Geotextile filter fabric is a non woven matting. It is used in almost all civil construction projects to stabilise soil whilst retaining porosity for water to flow.

### APPLICATIONS:

- Landscaping and roadside
- Lining dams and channels
- Road stabilisation
- Reinforcing retaining walls
- Wrapping ag pipe

### FEATURES / BENEFITS:

- Provides protection of one strata from damage by another
- Commonly referred to as bidim or geotextile/geofabric material
- Used for lining dams and channels for erosion protection
- Different grades and thicknesses suitable for any environment or application

### SPECIFICATIONS:

Roll	0.6m x 50m	120gsm
Roll	1.0m x 50m	120gsm
Roll	2.0m x 50m	120gsm
Roll	4.0m x 100m	120gsm
Handi Retail Pack	1m x 25m	120gsm
